Ideation plug-in

From idea to joint solution: every user can come up with an idea and have colleagues comment or vote on it.

Functionality

The Ideation plug-in from T-Systems MMS allows employees to make accessible their ideas – whether for process optimization, new workarounds or similar: an informative title, the precise description of the idea, and possibly an image or video. Ideas can promptly be liked and commented on, or even given a higher ranking with the help of a voting function. All ideas are stored centrally in a CSV file and can be exported.

Use case

All ideas can be made visible here. Leverage the Ideation plug-in to manage ideas – collect ideas and open them up to comments and voting. The Ideation plug-in can also add depth to an event and encourage interaction or, for example, be used to collect Christmas messages.

Availability & price

The Ideation plug-in is available for both the COYO Cloud and COYO Private Cloud as of V37 and is priced (based on the license model) from €3,400/ per year.
