

Live plug-in

Part of the action rather than just watching from the sidelines. The Live plug-in allows you to reach your entire workforce – device-independently, across locations, live and in color.

Functionality

The Live plug-in from T-Systems MMS offers you an easy solution for participation in and live integration into virtual events. And those who cannot be there live can still watch the recordings (which are made available on a long-term basis) afterwards. Live and in color: 30 hours per year, allows for customized use and supports any recording equipment. Hosting takes place on Azure International.

Use case

Getting employees from different locations together at the same place and the same time is no longer a challenge. The Live plug-in effortlessly transports your entire workforce to the scene of action – whether live on-site, streamed or time-delayed. Leverage digital solutions from the get-go to help you communicate, record, and further utilize your events.

Availability & price

The Live plug-in is available for both the COYO Cloud and COYO Private Cloud as of V37 and is priced (based on the license model) from €6,825/ per year.

Five steps to the Live plug-in

- Getting in contact with COYO
- Presentation of the Live plug-in
- Contract and terms of use
- Obtaining the manifest URL
- Installation and integration

Live

Welcome to our livestream!

You see the speech of our executive board and the following Q&A session.
Hand in your questions for the session over here.
